

Boost your business performance with Oracle Applications Testing Services

In today's competitive global marketplace, the Oracle E-Business Suite can be a powerful strategic tool for lowering costs, improving efficiency, and increasing business agility. Too many businesses fail to take full advantage of Oracle. One of the biggest reasons for this breakdown is because organizations lack a solid testing strategy to back up investments in expensive ERP systems.

On the surface, Oracle E-Business Suite testing might seem simple and straight forward, some key challenges that traditionally have bedeviled ERP testing engagements are:

- Lack of ERP testing skills
- Unavailability of business users for testing with Applications skills
- Inadequate time for end-to-end testing
- Low budget for testing
- Excessive time and cost needed to prepare functional test scripts
- Project delays and cost overruns tied to extensive regression testing
- High complexity and cost of maintaining test scripts:
 - Inability to re-use test scripts and test cases across different scenarios
 - Loss of productivity because subject matter experts need to be involved in the testing process

TRUST IT CONVERGENCE'S PROVEN ORACLE APPLICATIONS TESTING EXPERTISE

Increasingly, businesses view ERP testing as an expert service area that requires comprehensive knowledge in ERP software, testing, processes, methodologies, and technology.

IT Convergence Oracle Applications Testing services help businesses:

- Reduce lengthy testing cycles
- Overcome the cost and staffing availability limitations that have traditionally plagued in-house testing
- Apply appropriate skills in processes, technology, and tools throughout the testing cycle
- Add structure, discipline, and objectivity to the testing process
- Detect defects early in the project lifecycle
- Make informed go-to-market decisions
- Evaluate larger environments across the enterprise

Whether testing fresh implementations, upgrades, or enhancements in your Oracle environment, we apply our expertise to help customers improve business performance through increased process efficiencies and reduced costs that come with quality assurance.

IT Convergence offers a full suite of functional and non-functional application testing services to help organizations achieve business process assurance and make informed go-to-market decisions. Our approach is designed to identify and prioritize critical business functions at risk from application defects. Through this approach, and through industry best practices and proven methodologies, we can develop and implement cost-effective testing procedures specific to a business's needs that improve quality assurance and help mitigate risk.

Testing new Oracle Implementation	Oracle upgrades testing	Testing during the application of hot-packs provided by Oracle	Testing customizations made by the client
-----------------------------------	-------------------------	--	---

Our extensive experience in development, transformation, testing, and supporting Oracle ERP applications across numerous vertical industry segments has helped businesses prevent application defects from impeding service and negatively affecting business performance. Our risk-based approach to testing focuses on the identification and prioritization of critical business functions at risk from application defects to achieve comprehensive testing coverage, early defect detection, and lower costs of quality assurance.

By partnering with ITC, you gain access to extensive ERP implementation experience, knowledge of Business Process Testing (BPT) as well as intellectual property to provide an Oracle Applications Testing Solution that drives down the automation effort and facilitates easier maintenance of the test scripts.

Contact us today to find out how you can benefit from IT Convergence's Oracle Applications Testing Services.
